

HEALTH CARE

Recovery starts with nutrition

MDA is one of Australia's most respected hospitality consultants. We provide expert food and beverage consultancy services, design and concept services and innovative solutions to the industry. Specialising in a wide variety of projects from new facility development or redevelopment of existing facilities to refurbishments and expansions and installations of temporary facilities, our services can be tailored to suit your needs.

On average, a patient can spend up to 5.7 days in a public hospital and 5.2 days in a private hospital. Food is pivotal to a patient's care, providing a balanced and nutritional meal plan can make a significant impact to aiding recovery. If this balance of the right foods and nutrients is not provided then it can cause a delay in recovery time, increase the chance of complications and extend the length of stay of the patient. Care and attention on a patient's nutritional intake is important for hospital patients due to their increased requirements and often reduced appetites. It is perhaps not uncommon to have some patients with reduced appetites or perhaps patients just don't have the ability to eat a full meal due to their current condition. It is therefore imperative that every bite counts.

Our vision is to change the mindset and delivery health care food services to one of a better product and service to patients. By instilling design efficiencies, new technology and systems, we can assist facilities to provide a more superior product that is fresh and healthy and make a significant positive impact for the bottom line.

Here are just some of the services we offer that could provide you with better service.

Food Service Management
